

KeenanSec MDM Lab

Microsoft Intune: Device Enrollment, Compliance Policy & Configuration Profile

Author: Keenan Morrison | Tenant: KeenanSec.onmicrosoft.com | Date: April 11, 2026

This report documents the hands-on configuration of a Microsoft Intune environment built on a Microsoft 365 Business Premium tenant. The lab simulates an enterprise IT scenario where a single admin provisions a tenant from scratch, assigns licenses, enrolls a Windows 10 device, creates a compliance policy, builds a configuration profile, and sets up noncompliance notifications and group-based policy assignments. All steps were completed in the Microsoft Intune Admin Center and Microsoft Entra ID.

1. Device Enrollment

1.1 License Assignment

Before enrollment, a Microsoft 365 Business Premium (no Teams) license was assigned to the user account *overlord@KeenanSec.onmicrosoft.com* via the Microsoft 365 Admin Center. This activated Intune management rights for the account (24 of 25 licenses remain available).

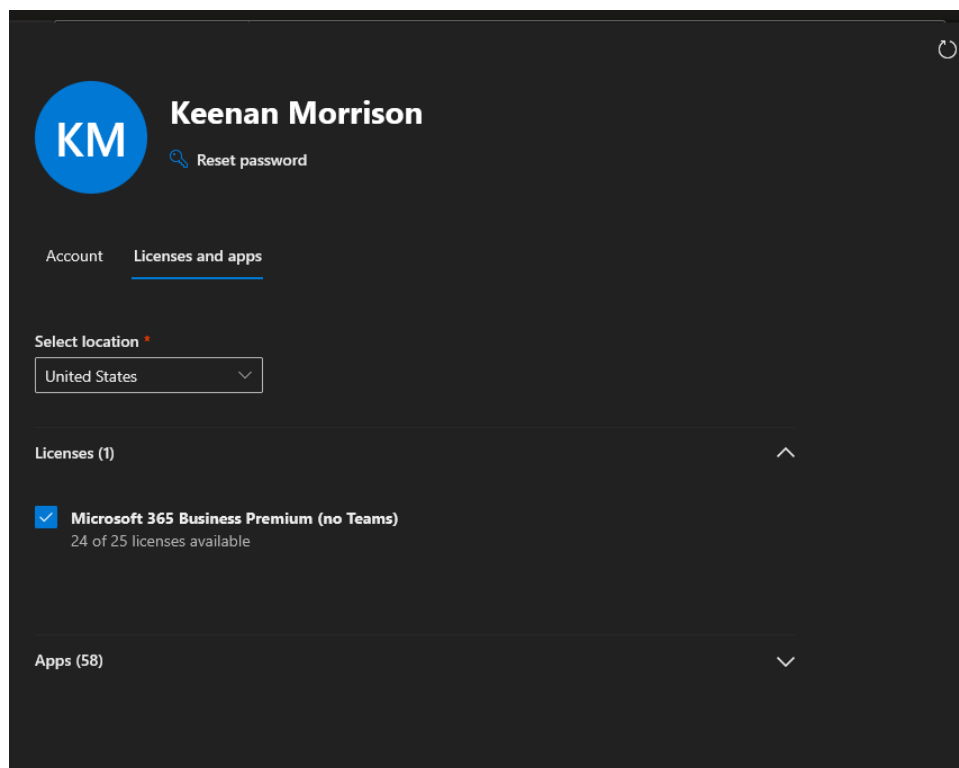

Figure 1 - License assigned to Keenan Morrison (Microsoft 365 Business Premium)

1.2 MDM Auto-Enrollment

MDM auto-enrollment was enabled in Microsoft Entra ID (formerly Azure AD) under Mobility > Microsoft Intune. The MDM user scope was set to All to allow any licensed user to enroll their device automatically.

1.3 Windows 10 PC Enrollment

The physical Windows 10 machine was enrolled via Settings > Accounts > Access work or school > Connect. Initial enrollment returned error 0x80180018 (MDM scope not yet configured). After enabling MDM auto-enrollment, the device successfully connected to the KeenanSec MDM tenant.

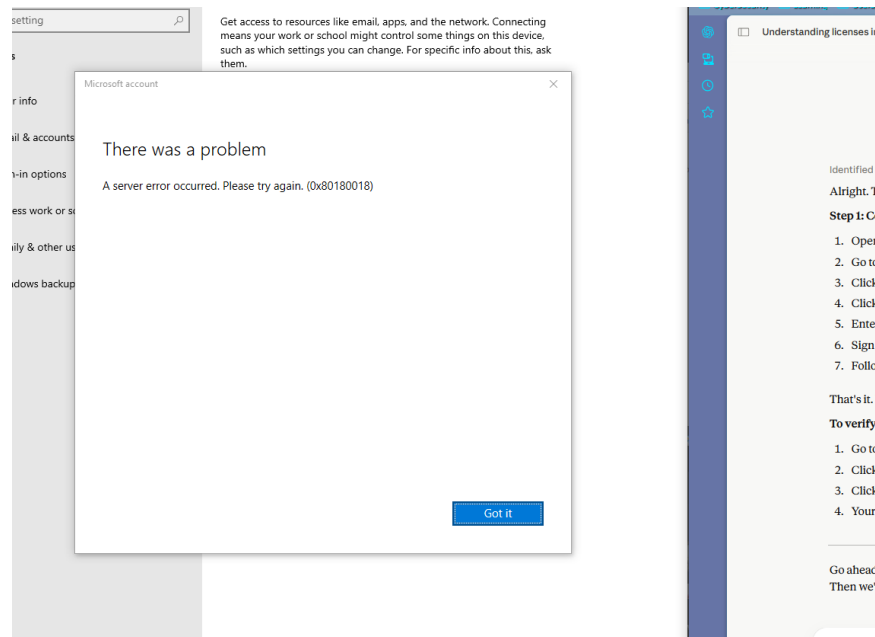

Figure 2 - Error 0x80180018 before MDM scope was enabled

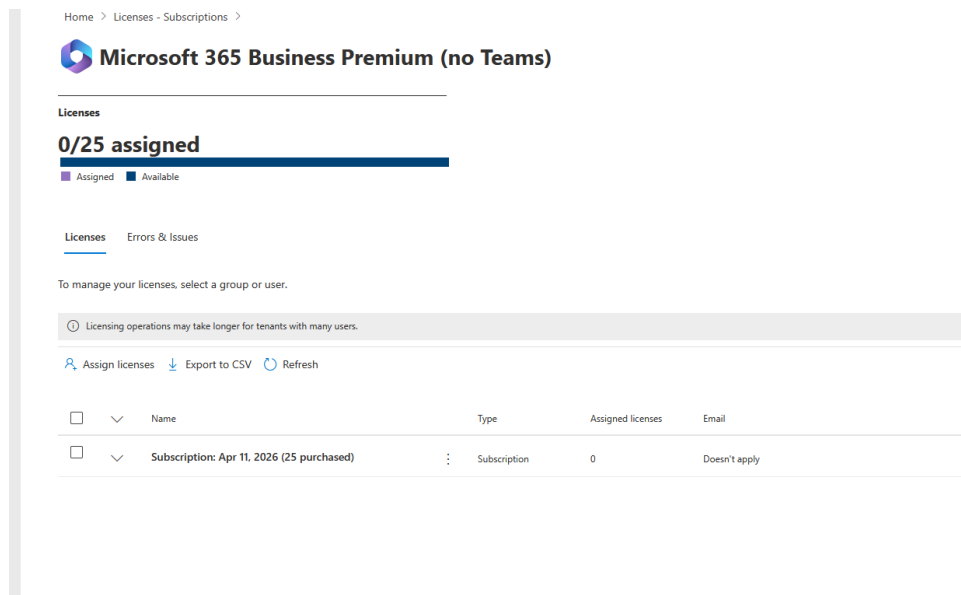

Figure 3 - Subscription showing 25 Business Premium licenses purchased

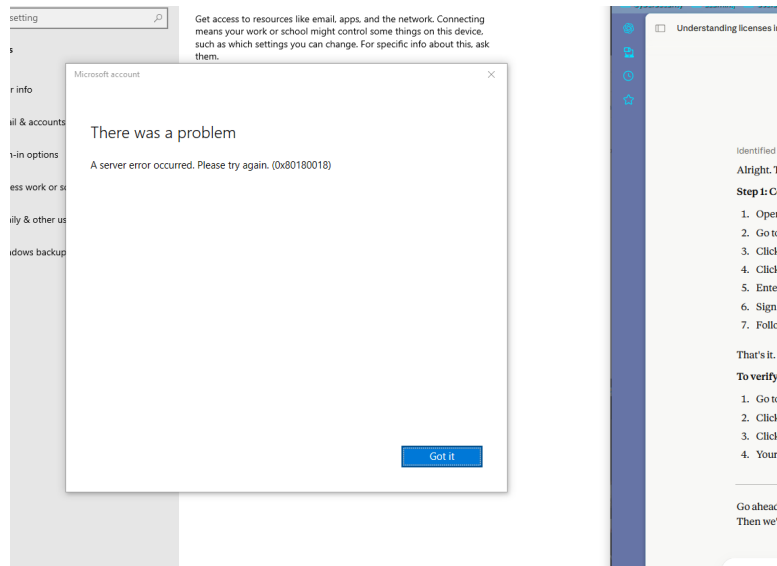

Figure 4 - Device setting up after successful enrollment

Enrollment Confirmation

After enrollment completed, the PC showed 'Connected to KeenanSec MDM' under Access work or school, confirming the device is now managed by the Intune tenant.

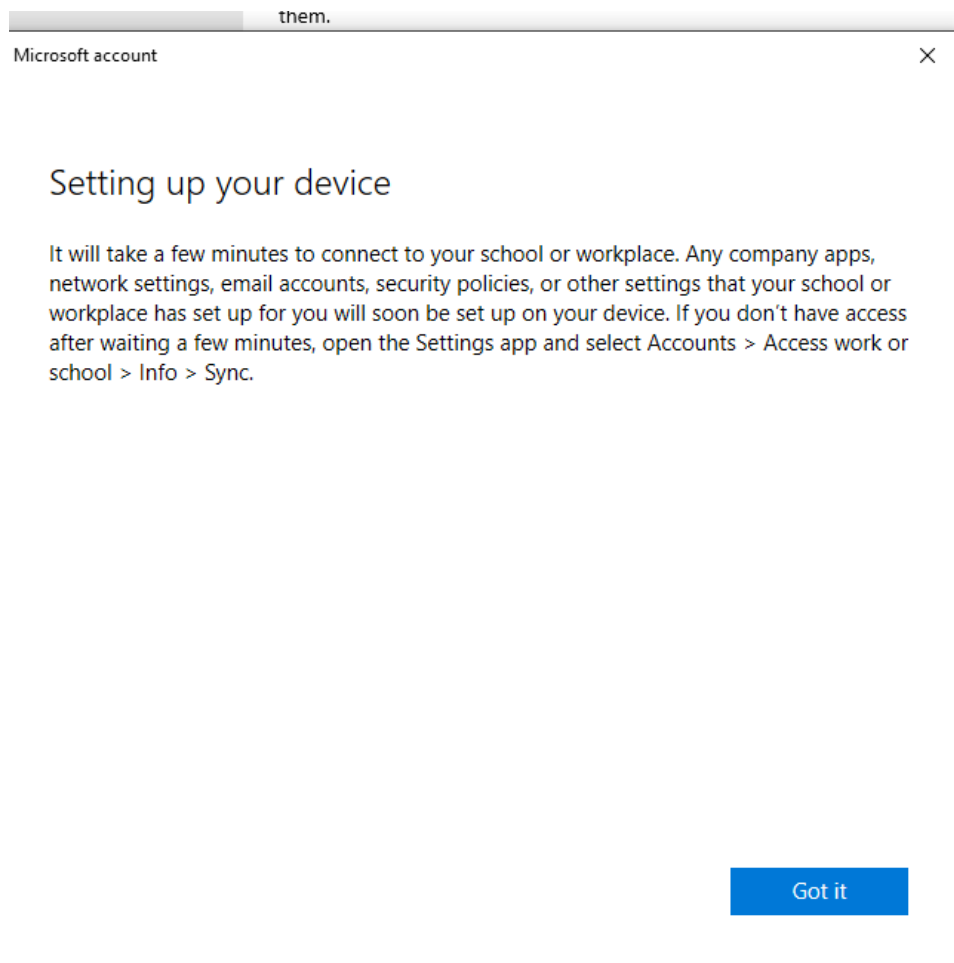

Figure 5 - 'Connected to KeenanSec MDM' confirmation on Windows 10

2. Azure AD Group: Intune-Pilot

A security group named **Intune-Pilot** was created in Microsoft Entra ID to serve as the assignment target for all policies. The group type was set to Security with Assigned membership. Keenan Morrison (overlord@KeenanSec.onmicrosoft.com) was added as the sole member, along with the enrolled device DESKTOP-U9IGUCJ.

4. Noncompliance Notification

A noncompliance notification template named **Noncompliance-Notice** was created and attached to the Windows-Baseline policy. When a device is flagged as noncompliant, an automated email is sent to the user after 1 day using the template below.

Email Template

Subject: Your device is not compliant

Message: Your device has been flagged as noncompliant with KeenanSec security policies. Common issues include outdated Windows updates, disabled antivirus, or missing encryption. If you need assistance, contact the IT helpdesk.

5. Policy Assignment and Final Review

The Windows-Baseline compliance policy was assigned to the **Intune-Pilot** group. The final review screen confirmed all settings, actions for noncompliance (mark immediately + send email after 1 day), and the group assignment (1 device, 1 user - Active status).

7. Lab Summary

Component

Status

Details

Device Enrollment	Complete	Windows 10 PC enrolled via work account
License Assignment	Complete	M365 Business Premium assigned to user
MDM Auto-Enrollment	Complete	Enabled in Entra ID for all users
Azure AD Group	Complete	Intune-Pilot group with 1 user, 1 device
Compliance Policy	Complete	Windows-Baseline with 16+ security rules
Noncompliance Notification	Complete	Email sent after 1 day of noncompliance
Configuration Profile	Complete	Windows-Config-Profile via Settings Catalog

This lab demonstrates the full initial setup of a Microsoft Intune MDM environment, from license provisioning through policy enforcement. The configuration mirrors real-world enterprise IT tasks performed by systems administrators and IT support staff.
